

GRANTI AGROBOX 1.85

Front transport box and ballast for tractors
Developed and field-tested in Latvia

Frees up machinery and labour

Reduces the need for extra equipment to haul water tanks to the field and deliver crop protection products with separate machinery.

Why AGROBOX 1.85 makes farm work easier

A universal solution for seasonal logistics — transporting crop protection products, mineral fertilisers, seeds, containers and other support materials directly to the workplace. It also serves as a full front ballast.

- The materials you need are always with you where the work is being done — fewer trips back to base and faster refilling in the field.
- Its 500 kg self-weight and up to 800 l capacity combine ballast and a transport box in one practical solution.
- The ergonomic shape, lowered front edge and gas struts make it easier to place and remove canisters and open the lid.
- The structure is designed for a high lifting position to reduce the risk of crop damage during work.

Equipment and quality

- ✓ Marker lights and interior lighting
- ✓ Lockable latch and ergonomic handle
- ✓ Gas struts for easy lid opening
- ✓ High-durability primer and paint finish
- ✓ Developed and tested in Latvia on a 1,500 ha farm

500 kg

Self-weight

Up to 800 l

Capacity

Up to 40 × 20 l

Canister capacity

2 in 1

Ballast + transport box
